

ethical.haus

XION + INJECTIVE: verifiable on-chain agent intelligence that turns high-signal X posts into transparent, trustless trades and creator rewards. Built on a custom quality layer with no third-party SaaS fees.

ERC-8004 Agent on Injective

XION + Verona

Opaque social algorithms bury quality.

Extractive social finance

- Centralized feeds hide high-signal content behind ads
- Creators cannot monetize without platform rent
- Trading is speculative, disconnected from real interactions
- No shared open infra for cross-app financial flows

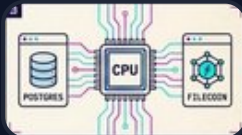

The open alternative

- Open networks reward meaningful participation
- Direct peer-to-peer monetization via superfluid streams
- Verifiable on-chain social reputation replaces obscurity
- Transparent execution rails for trustless interaction

Ethical Social Finance Trading

Open Data Engine

Postgres hot cache + Filecoin archive. X signal ingestion, normalized into a structured signal index sold as a paid reputation API.

DeFi Execution Core

ERC-8004 agent on Injective detects high-signal X posts, proposes trades via White Whale + Neptune liquidity, settles atomically and splits yield back to opted-in users.

Quality Ranking Radar

Our own 0-100 quality score -- only users scoring >80 reach the agent, structurally preventing spam, airdrop farming & engagement manipulation.

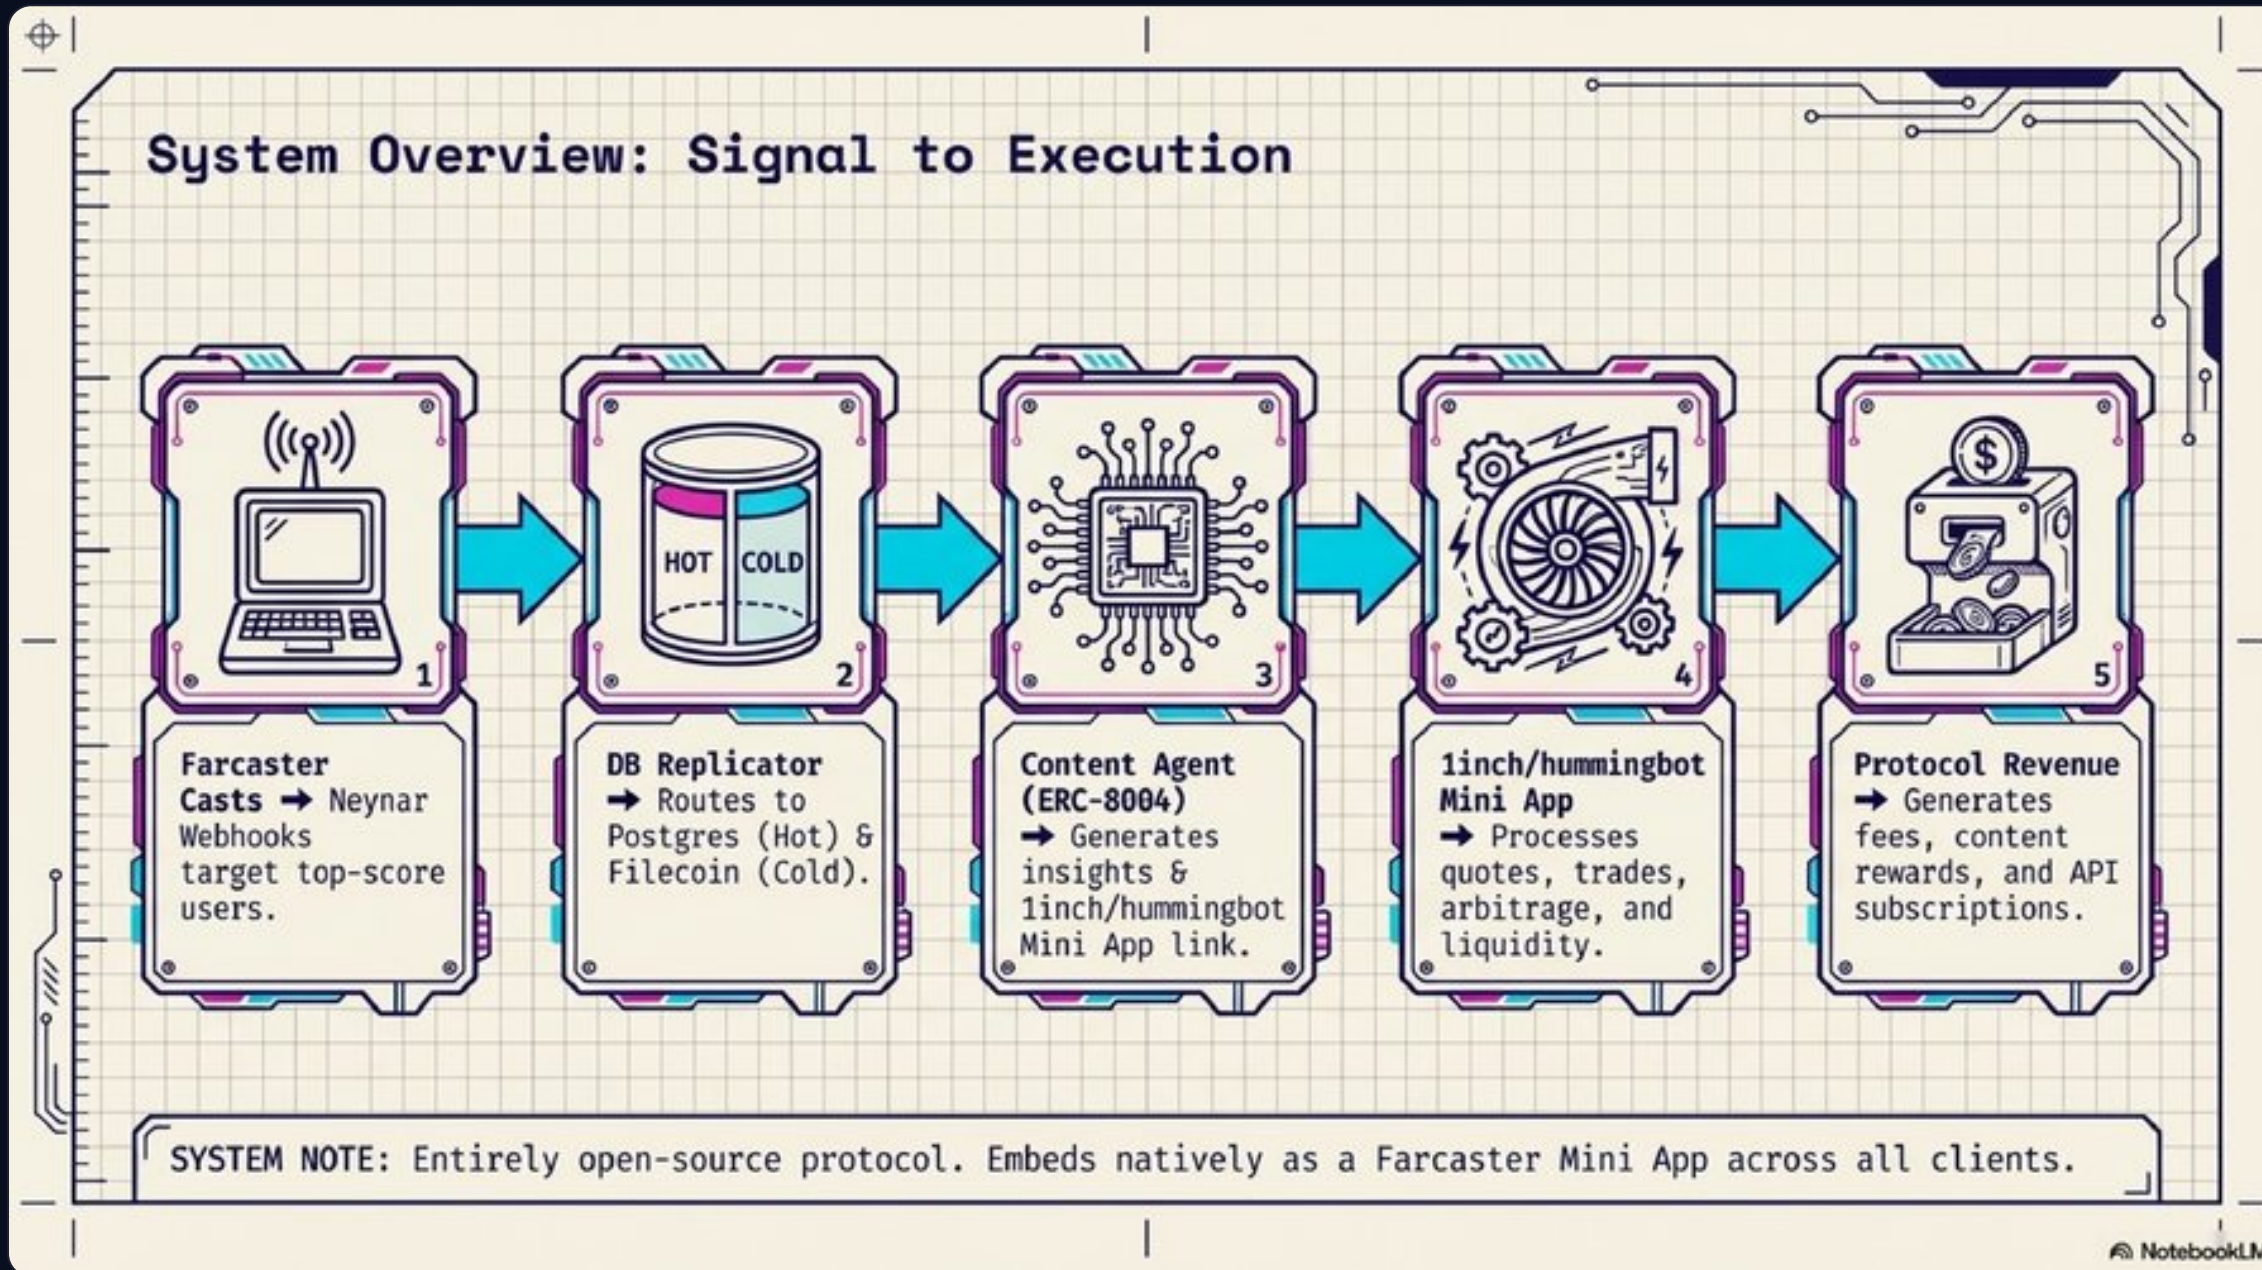

Social Finance Trading Hub

Creatorcoins + Buildercoins mapped to creators/channels and protocol maintainers. Fully on-chain, portable across clients, rewarded via superfluid streams on XION/Verona.

Signal to Execution

Speed + Sovereignty

~50\$/mo

total infra cost

Hot Tier -- Postgres

- **OK** Sub-10ms reads for live agent signals
- **OK** Drives 99% of ERC-8004 agent requests
- **OK** Live cache of scored X activity

Cold Tier -- Filecoin

- **OK** Censorship-resistant historical ledger
- **OK** Weekly JSONL dumps via Textile Buckets
- **OK** Free IPFS retrieval fallback

POSTGRES -> FILECOIN ARCHIVAL DEAL -- OPEN-SOURCE REPLICATOR

Our own quality score

A 0-100 score computed from on-chain identity (XION meta-accounts), interaction history, and ERC-8004 agent reputation. Agents only act on accounts scoring >80.

The Golden Rule

Focus exclusively on trusted accounts -- spam, airdrop farming, and engagement manipulation are structurally prevented, not reactively filtered.

80+

quality threshold

Value-Add Output

Agent replies only where it can append genuine context or White Whale + Neptune execution value -- never generic filler.

ERC-8004 Agent NFT

Trustless, on-chain reputation. The ERC-8004 Agent NFT (deployed on [Injective](#), validated via XION->EVM proofs) carries provable capabilities, endpoints, and interaction history.

- ● Register ERC-8004 Agent NFT on Injective
- ● Describe agent URI + endpoints
- ● Trust: reputation signals from quality layer
- ● Output: API revenue + creator rewards

“

Verifiable agent ethics before engaging

Users inspect on-chain interaction history & transparent scoring before any wallet signature -- zero blind trust required.

Anti-Sybil mechanic

Periodic recurring validation proves total tokens earned -- neutralizes empty tx-count spoofing.

White Whale + Neptune

Multi-DEX routing via White Whale arbitrage bots captures best pricing, while Neptune flashloan services provide atomic liquidity. Generated fees -- 1% to protocol infrastructure, remainder streamed to opted-in users on XION/Verona.

White Whale arbitrage bots

All surfaced as a web app shared by the trustless ERC-8004 agent on an X.com reply -- native to X, no mini-app runtime, zero third-party gas or scoring fees.

Neptune flashloan services

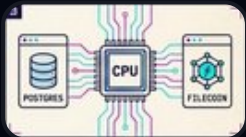

From Signal to Trade

1. Signal High-quality user posts a DeFi/social trade idea on X.

2. Filter Our quality score verifies the user -- Score > 80.

3. Context ERC-8004 agent on Injective queries Postgres + Fileion for live + historical signals.

4. Delivery Agent replies with insights + a Web App link on X.

5. Opt-In User opens the web app -- reviews White Whale/Neptune guaranteed quotes.

6. Execute User signs -- White Whale + Neptune settle via web app on X. Fees -> protocol + reward stream.

Sustainable protocol economics

\$135/mo

infra cost

1%

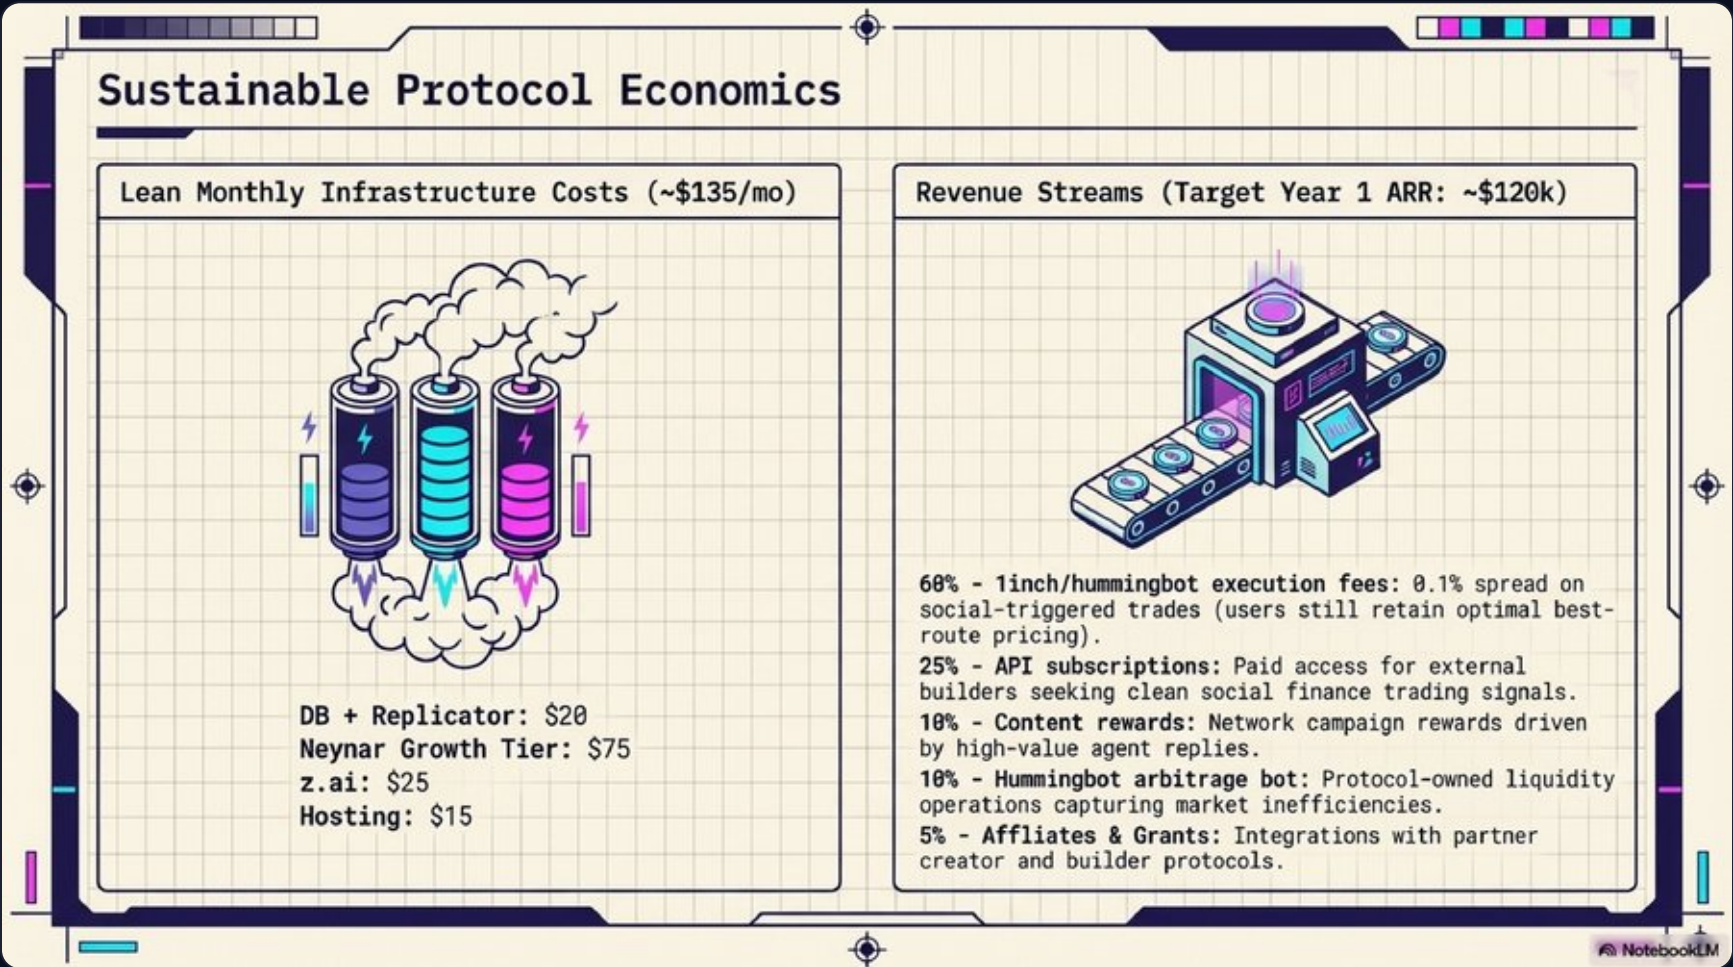

protocol fee

- **OK** White Whale/Neptune execution fees
- **OK** Paid reputation API subscriptions
- **OK** High-value agent reply content rewards
- **OK** Protocol-owned liquidity capture
- **OK** Affiliates & grants

Grant ask

\$20,000 -- 6-month runway to ship:

- **OK** Custom quality score system (no external scoring SaaS fees)
- **OK** ERC-8004 agent on Injective (XION/Verona settlement)
- **OK** X signal ingestion + White Whale/Neptune pipeline (no aggregator markups)
- **OK** Web app on X.com reply (no mini-app runtime fees)
- **OK** Creator/Builder reward distribution on XION/Verona

Dual-token trading ecosystem

Creatorcoins -- Social Layer

- Tokenized sovereign communities mapped to creators/channels
- 100% transparent routing via White Whale + Neptune web app
- Fully on-chain, portable across X social graph on XION/Verona

Buildercoins -- Protocol Layer

- Dedicated incentive tokens for maintainers & infra developers
- Rewards strictly linked to TVL + daily trading volume
- On-chain capital allocation based on real engagement -- not hype

“ Value alignment: tokens represent actual contribution & quantifiable social reputation -- not pure speculation.

Open protocols everywhere

X, ERC-8004, XION, Injective, Filecoin, Postgres.
Zero proprietary lock-in.

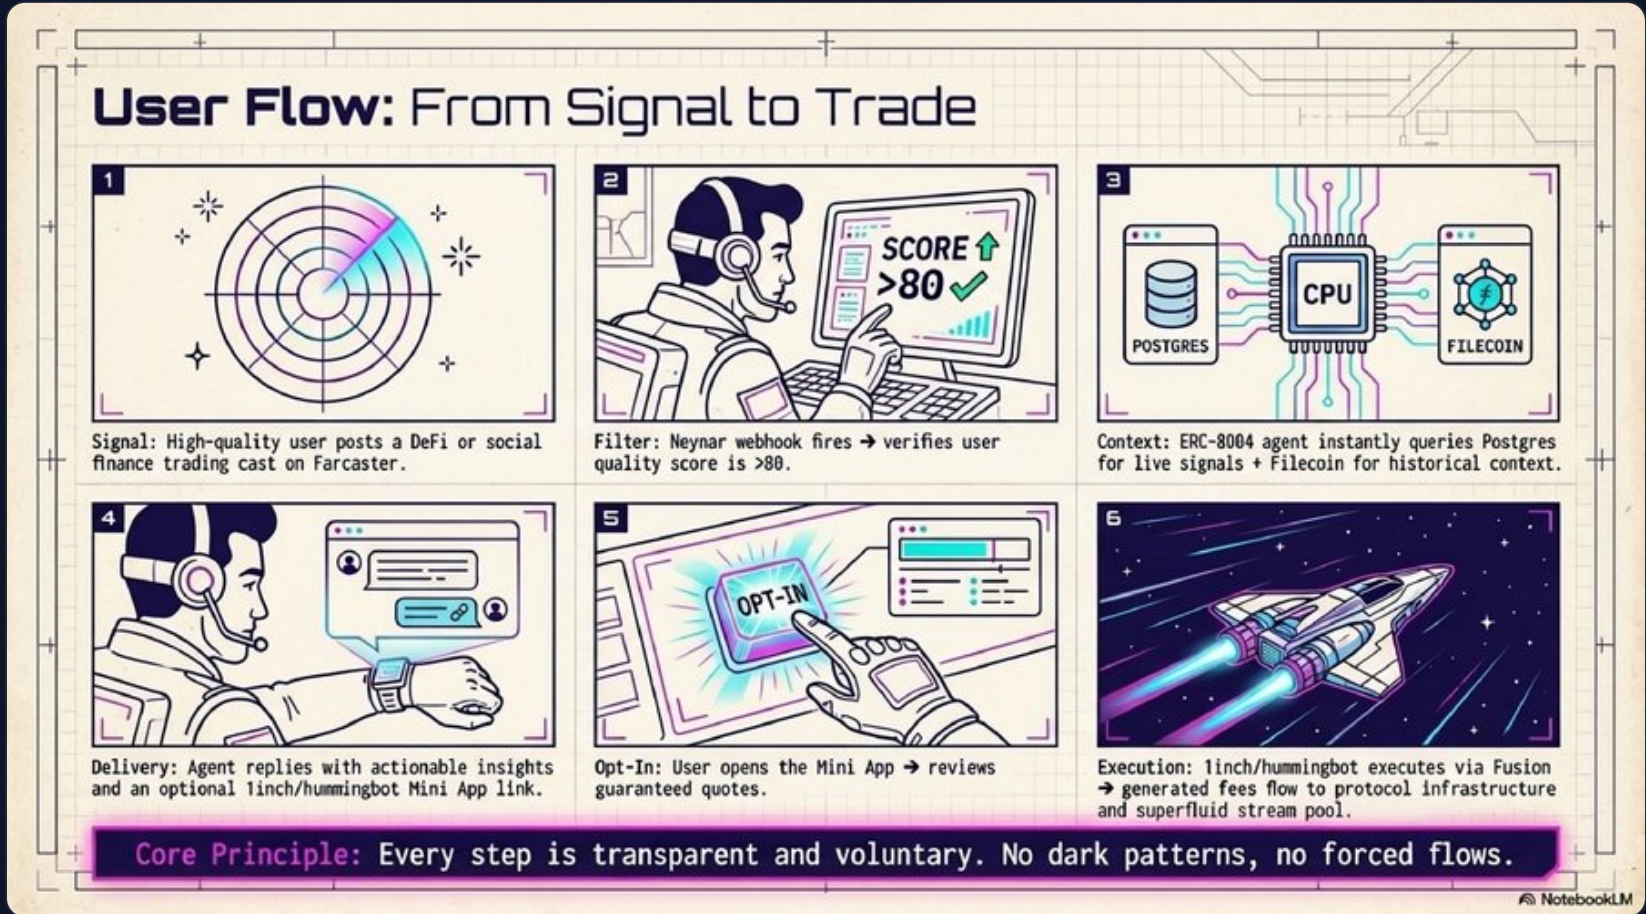

The protocol suggests; the user executes.
Explicit wallet signatures strictly required.

Our quality score + ERC-8004 reputation matrix neutralizes spam structurally
-- not reactively, by design.

Permissionless access -- any builder can consume our signal APIs
and construct proprietary UX on top.

Filecoin archive guarantees survival
of social finance history beyond any outage.

MISSION: We amplify good content and open finance instead of extracting user attention.

Flight path

- **Phase 1 (Month 1)** -- Postgres + Filecoin hybrid data layer goes live. Quality score agent goes live. \$20,000 grant kickoff.
- **Phase 2 (Months 2-3)** -- Multichain web trading app launches natively on XION + Verona + Injective. ERC-8004 agent minting enabled.
- **Phase 3 (Months 4-6)** -- Full White Whale + Neptune integration + Creatorcoin/Buildercoin distribution with superfluid streams. Quality score system finalized.
